

# RAPID ROAD SURFACE STABILIZATION CAPABILITY ASSESSMENT

**16 December 2020**

ERDCWERX, in collaboration with the U.S. Army Engineer Research and Development Center (ERDC), conducted a Rapid Road Surface Stabilization Capability Assessment to encourage white paper submissions for materials that result in rapid roadway strength improvements. The Army seeks to identify material solutions that support expedited vehicle maneuver across degraded and/or under designed roadway surfaces.

## Event Outcomes

- ERDCWERX received 32 submissions from 29 organizations, representing 18 U.S. states and two countries.
- Submissions were forwarded to the ERDC's Geotechnical and Structures Laboratory (GSL) for review and downselect.
- Selected white papers may be included in full-scale testing.
