

FAQs – Overtopping Breach Mitigation

Last updated July 23, 2025

Can field tests be performed anywhere or is it required for them to be conducted at ERDC?

ERDC has a levee reach located near Vicksburg that it would target for the demonstration.

If at ERDC, is the expectation that the field tests would be inside or could they be outside?

They would be outside.

If at ERDC, what in-kind resources are available (e.g. equipment, personnel)?

ERDC is hoping for technologies that could be implemented using traditional technologies that either it has or can rent.

If not at ERDC, is outside field location acceptable (e.g. at site in Georgia)?

If selected, ERDC can discuss, but the preference would be at the selected site. It is preferred that ERDC or District personnel would implement the technology.

If not at ERDC, are in-kind resources to be arranged/provided by awardee?

If selected, ERDC will arrange resources for implementation.

Are there upper ranges for allowable field test costs, if an award is made?

These should be reasonable, especially if the technology is ready to be implemented on a broad scale.
